- Wireless induction charging socket (5 W): Charge your smartphone or other compatible\* device by simply placing it on the lamp base.
- USB charging port: integrated USB 2.0 Type A connection 5 V, max. 1A, charge your smartphone or tablet (cable not supplied).
- **Brightness:** multiple settings, with its 3 color temperature modes to choose from and 5 levels of brightness adjustable by touch button, this lamp is fully optimized for rest, reading, work. Choose the best quality of light for your activities.
- Modern and sober design: fine and clean lines. Its head does not exceed 1 cm in thickness which gives it an elegant character.
- Smart: The memory feature allows you to adjust the brightness once, it will automatically return to your setting when you turn it back on.
- Automatic: depending on the ambient light of your workspace, the lamp adapts its light for a better visual comfort, thanks to its brightness sensor.
- Rated power: this luminaire contains integrated LED lamps with a power of 13,7 W which can not be replaced
- Lifetime \*\* of LEDs: 50,000 hours
- Illuminance of 1030 Lux at 35 cm
- Color temperature: 3000 K / 4000 K / 5000 K
- Weighted energy consumption: 11,4 kWh / 1000 h
- Luminous efficiency \*\*\* of LEDs: 139 lm / W
- Energy efficiency: class A / A + / A ++ (spectrum A ++ to E)
- CRI: 80
- 2 years warranty
- Maximum height: 35 cm / minimum height: 25 cm
- Materials: base and ABS plastic head / aluminum arm

\* If your smartphone does not have a wireless charging option, simply add a Qi charging shell. \*\* Average consumption: 1000 h / year \*\*\* Light emission of the lighting source

# UNILUX'S ADVICES

## 1- Why using a desk lamp?

We spend about 8 hours a day at our place of work. Occupational medicine recommends lighting of at least 450 lux. The European standard NF EN 12464-1 \* goes up to 500 lux for screen work or reading. You should know that an office equipped with fluorescent ceiling lights usually receives 200 and 300 Lux for those in LED!

Luminous flux (Im) is defined by the sum of all the radiations emitted by the lamp. It is measured in Lumen, "Im" for short. It is defined from the energy flux (expressed in watts) more often termed radiated power. The latter is a flow of radiated energy:

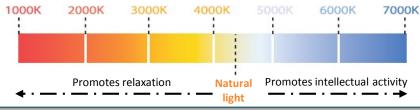

$$\Phi = \frac{Q}{t}$$

where Q is the radiated energy, expressed in joules (J) and t in seconds (s)

Luminous efficiency (Im/W) corresponds to the luminous efficiency of the lamp. This value is established by the ratio between the luminous flux and the power consumed. It is measured in "Im / W". The higher the luminous efficiency, the higher the amount of light relative to the power consumed. This data is fundamental for the preservation of the environment since it allows us to reduce energy consumption for the same amount of light emitted.

CE 🗷 RoHS

Color temperature (Kelvin) is defined by the color emitted by the light source. Variation in color temperature is an essential function of the desk lamp in addition to the variation of the intensity, as it allows to customize the lighting and to adapt the appropriate color temperature to the different activities (computer work , concentration, reading, relaxation, rest, ...). This variation in color temperature is measured in "Kelvin", "K" for short.
